

ABOUT US

We are a national network of exceptional fibroid centers specializing in the leading FDA-approved, advanced non-surgical fibroid treatment option called Uterine Fibroid Embolization (UFE). This outpatient procedure focuses on treating symptomatic fibroids with minimally invasive technique that allows a shorter recovery and helps preserve fertility.

At USA Fibroid Centers, our interventional radiologists have helped thousands of women suffering from fibroids relieve painful, unpleasant symptoms, and improve their overall quality of life.

USA FIBROID CENTERS Can Help You Relieve Fibroid Symptoms and Regain the Freedom to Live the Life You Love.

Fibroids can greatly impact social, work and sex life of those with the disease, as well as their emotional well-being. On top of that, women diagnosed with fibroids are often told that surgery is their only option, which is not always the case. Come talk to our fibroid experts today and find out whether UFE could offer you a better solution and a freedom to live a better life.

UTERINE FIBROID EMBOLIZATION

USA Fibroid Centers Offers a Non-Surgical Treatment Alternative to Hysterectomy

WHAT ARE FIBROIDS?

Uterine fibroids are a common, often serious condition. Although benign, they cause significant symptoms such as anemia due to heavy menstrual bleeding. These benign tumors are also known as **myomas** or **leiomyomas**.

FIBROID SYMPTOMS

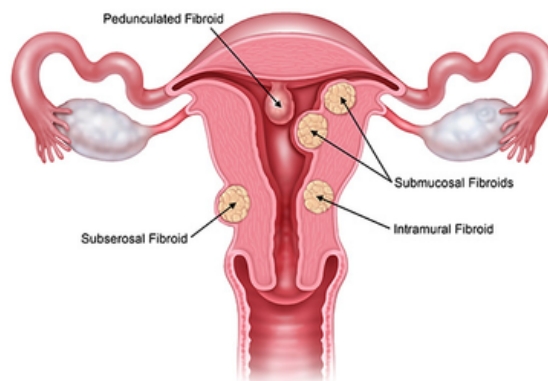

- 🍷 Heavy or Prolonged Menstrual Periods
- 🍷 Anemia Causing Fatigue
- 🍷 Pelvic Pain or Pressure
- 🍷 Pain During Sexual Intercourse
- 🍷 Frequent Urination
- 🍷 Constipation or Bloating

WHAT ARE MY OPTIONS?

Many women suffering from symptomatic fibroid pain or heavy, prolonged menstrual bleeding are told that a hysterectomy is their only option.

At USA Fibroid Centers, we offer our patients minimally invasive, non-surgical treatment for fibroid symptoms called **Uterine Fibroid Embolization (UFE)**.

WHAT TO EXPECT DURING A UFE PROCEDURE?

At USA Fibroid Centers, our interventional radiologists specialize in fibroid treatment and have helped thousands of women. On the day of the treatment, the fibroid specialist will use image guidance to infuse a therapeutic agent into the fibroid, which will result in the fibroid shrinking. Patients are typically out of the procedure room in 30 to 45 minutes.

FAQs

Why choose USA Fibroid Centers?

We offer our patients minimally invasive and non-surgical treatment for fibroid symptoms. Our interventional radiologists are specialized in fibroid treatment and have successfully treated thousands of women suffering from heavy bleeding and pain.

Who is at risk for uterine fibroids?

Fibroids are common, and often a serious condition. Age, family history, ethnic origin, obesity and eating habits are some of the risk factors for uterine fibroids.

How do I know if I have fibroids?

Have you been told you have fibroids? If you are experiencing heavy and prolonged menstrual periods that continue for more than 5 days per month, or more often than 25 days apart you should contact USA Fibroid Centers for evaluation and treatment.

What is the recovery time for UFE?

Most women completely recover in 1-2 Weeks.

Is there any hospitalization required after a UFE Procedure?

At USA Fibroid Centers, UFE is performed as an outpatient procedure. After a short recovery, the patient can go home the same day after the treatment.

Can I resume having children?

According to a new study published online in the journal Radiology a minimally invasive treatment such as (UFE) can help restore fertility in women with uterine fibroids.*
